PORTFOLIO

- github.com/LOR-afk
- lore-portfolio-flax.vercel.app

TECHNICAL SKILLS

- Database Management
- Web Development
- Quality Assurance
- Networking and Troubleshooting
- Digital Forensic (Autopsy)
- Virtualization (VirtualBox)

WORK TOOLS | PROGRAMMING LANGUAGE & FRAMEWORK

- VS Studio
- MySQL
- Python
- Flutter
- Java
- PHP | Laravel | React
- Native PHP | React Native
- Kali Linux
- Ubuntu Linux
- Burp Suite
- VirtualBox
- Cisco Packet Tracer

PERSONAL SKILLS

- Professionalism
- Critical Thinking
- Analytical Thinking
- Communication Skills
- Teamwork and Collaboration
- Adaptability
- Problem Solving
- Leadership
- Integrity and Accountability
- Willingness to Learn

OBJECTIVES

Motivated fourth-year Bachelor of Science in Information Technology (BSIT) student specializing in Cybersecurity. Eager to apply my knowledge in networking, programming, database management, and cybersecurity while contributing to organizational goals. Seeking an internship or entry-level opportunity to further develop my technical skills and gain hands-on industry experience.

EDUCATION & CERTIFICATION

BACHELOR OF SCIENCE IN INFORMATION TECHNOLOGY

PHINMA Cagayan de Oro College | 2023-PRESENT

- Fourth-year Student
- Specializing in Cybersecurity and System Development
- Certificate of Completion | Artificial Intelligence in Cybersecurity Perspective Seminar | Certify
- Certificate of Completion | Introduction to Cybersecurity Course | Cisco Networking Academy
- Certificate of Completion | Ethical Hacking Course | Cisco Networking Academy

Cagayan De Oro National High School SHS | 2021-2023

- Graduated from Senior High School under the General Academic Strand (GAS) with a specialization in Information Technology.

Cagayan De Oro National High School | 2017-2021

- Graduated with Honors

RELEVANT EXPERIENCE

Teaching JAVA Programming Language

Teaching JAVA | January 2024 - February 2025 (Seasonal)

- Teaching and Assisting Grade 12 STEM Student in Corpus Christi for their Work Immersion

PROJECTS

Web-Based Billing and Scheduling Management System for WR Plumbing and Construction Services

Capstone Project | 2025 – 2026

Laravel | PHP | MySQL | HTML | CSS | JavaScript | Bootstrap | Git | VS Code

Collaborated in the development of a comprehensive web-based management system that automates billing, scheduling, and service operations for WR Plumbing and Construction Services. The platform enhances workflow efficiency by digitizing business processes, improving customer engagement, and providing real-time project monitoring.

- Designed modules for service request management, quotation processing, technician scheduling, and project tracking.
- Developed billing and payment management features, including payment verification, invoice generation, and progress monitoring.
- Implemented secure role-based access control and interactive dashboards for administrators, HR personnel, inspectors, and clients to support efficient business operations.

Budget Tracker Mobile Application

Personal Project | 2024 – 2025

Flutter | Dart | Hive | SQLite | HTML | CSS | Git | VS Code

Designed and developed a mobile budget tracking application to help users efficiently manage their personal finances by monitoring income, expenses, savings, and financial goals. The application provides an intuitive interface for recording transactions, tracking spending habits, and generating financial summaries.

- Developed features for recording and categorizing income and expense transactions with real-time balance updates.
- Implemented budgeting and savings modules with expense tracking, financial reports, and transaction history to help users monitor their financial activities.
- Integrated local database storage using Hive and SQLite, enabling secure offline access, fast data retrieval, and efficient management of user financial records.

TourCDO – Web-Based Tour Booking System
Academic Project | 2024

PHP | MySQL | HTML | CSS | JavaScript | Bootstrap | VS Code
Developed a web-based tour booking system that allows customers to explore travel packages, submit booking inquiries, and securely manage reservations. The platform provides an organized way for administrators to manage tour packages, customer bookings, and payment information while improving the overall booking experience.

- Developed modules for tour package management, customer registration, booking requests, and payment processing.
- Designed a responsive interface showcasing featured destinations, package details, and inquiry forms for seamless user interaction.
- Implemented an administrative dashboard for managing tour packages, customer records, bookings, and system content efficiently.

Vulnerability Assessment and Penetration Testing (VAPT) of WR Plumbing System

Personal Cybersecurity Project | 2026
Kali Linux | Burp Suite | OWASP ZAP | Nmap | Nikto | Laravel | MySQL
Performed a comprehensive security assessment of the Web-Based Billing and Scheduling Management System for WR Plumbing and Construction Services to identify, analyze, and mitigate security vulnerabilities following OWASP Top 10 best practices.

- Conducted vulnerability scanning and penetration testing against authentication, input validation, and session management.
- Identified and documented potential SQL Injection, Cross-Site Scripting (XSS), Broken Authentication, and Insecure Direct Object Reference (IDOR) vulnerabilities.
- Produced a professional Vulnerability Assessment Report with risk ratings, proof of concept, and mitigation recommendations.

OWASP Juice Shop Security Assessment
Personal Cybersecurity Lab | 2024–2026

Kali Linux | Burp Suite | OWASP Juice Shop | Firefox | DevTools
Performed security testing on the OWASP Juice Shop vulnerable web application to identify and exploit common web vulnerabilities while learning secure application testing methodologies.

- Conducted SQL Injection, Cross-Site Scripting (XSS), and authentication testing.
- Utilized Burp Suite to intercept, modify, and analyze HTTP requests and responses.
- Documented discovered vulnerabilities and recommended mitigation strategies based on OWASP guidelines.

Network Scanning and Enumeration Laboratory
Personal Cybersecurity Lab | 2025–2026

Nmap | Kali Linux
Performed network reconnaissance and host discovery to identify active devices, open ports, and running services.

- Conducted TCP and UDP port scanning.
- Performed service and version detection.
- Documented network enumeration findings.

Network Traffic Analysis Laboratory
Personal Cybersecurity Lab | 2025–2026

Wireshark
Captured and analyzed network traffic to understand communication protocols and identify suspicious network activity.

- Inspected TCP/IP packets and application-layer protocols.
- Analyzed HTTP and DNS traffic.
- Identified network communication patterns.

PicoCTF Capture The Flag (CTF) Challenges
Personal Cybersecurity Training | 2025 – Present

PicoCTF | Kali Linux | Burp Suite | Linux | Python
Completed hands-on Capture The Flag (CTF) challenges through PicoCTF to strengthen practical cybersecurity skills in web security, cryptography, digital forensics, reverse engineering, and Linux fundamentals. Applied problem-solving techniques and ethical hacking methodologies in a controlled learning environment.

- Solved challenges involving Linux command-line navigation, file analysis, web exploitation, cryptography, and binary exploitation.
- Practiced vulnerability identification, flag retrieval, and secure problem-solving using industry-standard cybersecurity tools.
